SOLUTIONS = SAVINGS

Quality Reel Solutions knows the importance of controlling your wood reel costs. QRS not only offers competitive pricing and great customer service, QRS offers solutions that can help you reduce your current overall costs for wood reels.

Standard lumber sizes limit your options for reel construction. One such standard is $\frac{3}{4}$ " thick lumber. 2 plies of $\frac{3}{4}$ " lumber provides you with a $1\frac{1}{2}$ " flange thickness on nailed wood reels. For some customer requirements, $1\frac{1}{2}$ " is just right. For others, 2 plies of thinner lumber would work just as well. If only $\frac{5}{8}$ " lumber was available, you could have a thinner flange, and thinner costs. QRS has THE SOLUTION!

QRS now offers $\frac{5}{8}$ " lumber. We can build those $1\frac{1}{2}$ " flange nailed wood reels, that you are currently purchasing, with $\frac{5}{8}$ " lumber, reducing flange thickness by 17% while maintaining 2 ply strength. Just imagine what QRS can do for the cost of your reel!

A thinner flange option is not for everyone. If you think it is for you, contact QRS for a no obligation assessment of your reel program, and see how we can help you start saving immediately.
